

UMAP of 162 Bacteroidales isolates with type strains

Anvio Gene Clusters

species

- |                              |                            |
|------------------------------|----------------------------|
| Alistipes communis           | Bacteroides xylanisolvens  |
| Alistipes finegoldii         | Butyricimonas paravirosa   |
| Alistipes onderdonkii        | Butyricimonas synergistica |
| Alistipes putredinis         | Hoylesella buccalis        |
| Alistipes shahii             | Leyella stercorea          |
| Bacteroides caccae           | Odoribacter splanchnicus   |
| Bacteroides cellulosilyticus | Parabacteroides distasonis |
| Bacteroides eggerthii        | Parabacteroides johnsonii  |
| Bacteroides faecis           | Parabacteroides merdae     |
| Bacteroides finegoldii       | Phocaeicola coprocola      |
| Bacteroides fragilis         | Phocaeicola dorei          |
| Bacteroides intestinalis     | Phocaeicola massiliensis   |
| Bacteroides nordii           | Phocaeicola vulgatus       |
| Bacteroides ovatus           | Segatella brasiliensis     |
| Bacteroides salyersiae       | Segatella brusvicensis     |
| Bacteroides stercoris        | Segatella copri            |
| Bacteroides thetaiotaomicron | Segatella sinica           |
| Bacteroides uniformis        |                            |
